Abstract : *e-learning is learning and utilizing electronic technologies to access educational curriculum outside of a traditional classroom. Alternatively we can say that a learning system based on formalized teaching but with the help of electronic resources is known as e-learning. We will find out the provision and available resources of e-learning by looking into sites available for students of schools and colleges. We will also find out the prospects and planning, i.e., study the future scope of e-learning and in what way it is going to impact our future.*

In our research project we will focus on what is e-Learning and its usefulness, and to what extent people are aware of it, use it and find it helpful for them.

The main aim of our paper is to observe how people are using e-learning technique and what they think about it. We will also try to find out how many students of different age groups are using online method for learning purpose.

Keywords: *e-learning, tutorials, online education, conventional learning.*

Introduction :

e-learning is learning and utilizing electronic technologies to access educational curriculum outside of a traditional classroom. We can also say that a learning system based on formalized teaching but with the help of electronic resources is known as e-learning.

E-learning is essentially the computer and network-enabled transfer of skills and knowledge. e-content is delivered via the internet, intranet/extranet, audio or video tape, satellite TV, and CD-ROM. Abbreviations like CBT (Computer-Based Training), IBT (Internet-Based Training) or WBT (Web-Based Training) have been used as synonyms for e-learning. e-learning can also be termed as a network enabled transfer of skills and knowledge, and the delivery of education is made to a large number of recipients at the same or different times. In order to provide proper e-Learning, various sites and applications are available online with
